ISTQB® Foundation

ISTQB® accredited course developed and delivered by accredited tutors.

ISTQB® certified staff can provide a competitive advantage for your company, with a higher level of reliability of applications, structured testing practices and optimization of test activities, derived from the ISTQB® competencies.

The Foundation Level qualification is aimed at professionals who need to demonstrate practical knowledge of the fundamental **concepts of software testing**. This includes people in roles such as **test designers, test analysts, test engineers, test consultants, test managers, user acceptance testers and IT Professionals**.

ISTQB® certified testers increase their marketability by gaining independently assessed knowledge and skills. This certified staff can offer high-level services to customers, increasing revenue and brand value.

ISTQB FOUNDATION – COURSE OBJECTIVES

Foundation Level professionals should be able to:

- Use a common language for efficient and effective communication with other testers and project stakeholders.
- Understand established testing concepts, the fundamental test process, test approaches and principles to support test objectives.
- Design and prioritize tests by using established techniques.
- Write clear and understandable incident reports.
- Effectively participate in review of projects.
PREPARATION

Before the start of the course you will receive part of the course material by mail to be studied. You will also be asked to bring (if possible) a design or requirements document to use in an exercise for Static Techniques.

KEY BENEFITS

"Having certified staff is a competitive advantage for your organization."

- ✓ Adoption of structured testing practices
- ✓ Optimization of test activities
- ✓ Increase marketability
- ✓ Increase revenue and brand value
- ✓ A common language for efficient and effective communication
